

FactSet Data Solutions via Snowflake

Centralize, integrate, and analyze disparate data sources with the Snowflake Data Cloud, a powerful platform that allows you to leverage world-class content and analytics alongside your own data for faster, more cost-effective decision-making.

EFFORTLESSLY ALIGN DISPARATE DATASETS IN A POWERFUL DATA CLOUD

Combine FactSet’s market-leading content and analytics with your own data in a robust cloud infrastructure. Snowflake provides you with all the tools you need to:

- Ensure integrity with pre-blended, normalized, and fully vetted financial data mapped, cleaned, and consolidated by FactSet
- Streamline integration using FactSet’s entity master and symbology databases to provide one-to-one relationships between locally managed identifiers and the FactSet entity ID
- Stay competitive, make more timely decisions, and experience superior analytics, benchmarks, and tick history data with the speed and modernization of the cloud
- Integrate best-in-class, proprietary portfolio analytics data using self-service configurable data feeds to perform powerful, detailed analysis on the fly
- Gain access to trade and BBO quote messages for 11+ years as well as Level 2 Market-by-Price data—sourced from the Level 3 order book by BMLL—to optimize your compliance workflows, transaction cost analysis, and research and backtesting strategies
- Experience increased data flexibility and cost savings while gaining access to content across all major cloud providers

GAIN AN END-TO-END WORKFLOW SOLUTION

When it comes to accessing content anytime and anywhere, you need a secure platform that can blend your existing data with trusted, best-of-breed analytics. FactSet's integration with Snowflake via direct share or its Marketplace does just that.

Quick Start: Get started right away with Snowflake's simple but sophisticated platform. FactSet content is instantly accessible through a Snowflake data share, giving you everything you need with minimal preparation or ramp-up time.

Backtesting: Leverage FactSet's unique symbology mappings to overcome any discrepancies related to backtesting, allowing you to focus on analyzing results, enhancing reports, and demonstrating compliance with confidence.

Workflow: Rely on a single system for your analytic, risk management, concordance, and regulatory needs. Access live and ready-to-query data made possible with in-place sharing. Use FactSet's extensive expertise in acquiring, integrating, and managing third-party content to optimize the organization of your assets and ensure complete and consistent data.

Leading Content: Complement your proprietary data with industry-leading content that's ready when you are. Find untapped alpha with unique and alternative datasets backed by best-in-class symbology. Discover pre-linked, harmonized data from the most impactful providers and join them with FactSet's exclusive data feeds through the Open:FactSet Marketplace.

Data Linking: Outsource the cumbersome task of mapping data from various sources with FactSet's Concordance Service. Align disparate content sets with an automated, high-quality data model that can link hundreds of entity records in seconds.

Snowflake Marketplace: Discover and experience FactSet content quickly and easily with the Snowflake Marketplace integration.

Managed Databases: Reduce the time and expense of data management. Quickly scale the latest datasets with open, flexible technology. Run complex queries and eliminate the need for database performance tuning. Rely on FactSet to manage every aspect of the extract, transform, and load (ETL) process for structured and semi-structured content.

Portfolio Analytics: Easily store and scale portfolio analytics with cloud integration. Personalize attribution preferences and characteristics for your portfolios. Unify your warehousing and data processing strategies for standard data, benchmark data, third-party data, tick history, and analytics.

Order Execution Analysis: Harness comprehensive, high-quality tick data to gain liquidity insights and perform in-depth order execution analysis. Benefit from granular, normalized tick history data without the need to build your own tick data warehouse.

Seamless Integration: Already a Snowflake user? Link FactSet data to custom and related content within Snowflake.
